

Nomad Energy – ISO 9001 and 14001 Certifications

FEB 5, 2021 | PRESS RELEASE

We're delighted to announce our Spanish manufacturing plant - operating under our subsidiary NOMAD Energy SL - has achieved ISO 9001:2015 and ISO 14001:2015 certifications from United Registrar of Systems Ltd (URS). This marks a successful end to the first phase of our global manufacturing ambitions.

Our NOMAD manufacturing facility can produce a Gigawatt of our prefabricated solar trackers per year at full capacity. "We're very pleased with the results of our recent factory build," said Lourdes Coll, NOMAD's Quality and HSE Manager. "These certifications reinforce our commitment to quality, and we expect these efforts will translate into meaningful cost savings for solar installations worldwide."

"These ISO 9001 and 14001 certifications are evidence of our commitment to implementing quality manufacturing systems with an environmentally focused mindset," said Carlos Garcia-Sutter, NOMAD Plant Manager. "This commitment should give complete confidence in our ability to meet our customers' needs, while also complying with the strictest of regulatory requirements in a wide range of regulatory jurisdictions."

"I'm incredibly proud of Lourdes, Carlos, and the entire NOMAD team," said Tom Miller, CEO of NOMAD's parent company, Cambridge Energy. "Responsible manufacturing is at the core of our future and we look forward to replicating this blueprint across global markets."

About Cambridge Energy

Cambridge Energy is a manufacturer of prefabricated solar trackers for the remote industrial market. Our NOMAD solar tracker enables both fast installation and redeployment yet provides the same performance as traditional large-scale solar trackers. The company is based in Cambridge, UK, with offices in Spain, South Africa, and Canada.
