

Cambridge Energy and Release by Scatec extend exclusive partnership in Africa

Simultaneously, Cambridge Energy announces commercial deployment of its second-generation Nomad, the Montaro – set to revolutionize solar farm cost and deployment speed.

MAY 21, 2024 | PRESS RELEASE

Cambridge Energy is today announcing a strengthening of its longstanding collaboration with Release by Scatec, which is focused on advancing solar energy across the African continent.

Release by Scatec has recently secured funding from private equity investors Climate Fund Managers (CFM), the International Finance Corporation (IFC), and parent company Scatec to deploy its 300 MW pipeline with prefabricated solar across Africa.

The extended partnership also marks the launch of the newest version of Cambridge Energy's Nomad technology – the Montaro – and will give Release by Scatec exclusive use of the product in Africa over the next 2 years.

Cambridge Energy's Nomad technology is a world-first concept that enables solar farms to be prefabricated in controlled factory conditions – resulting in simple, quick, and cost-effective deployments at site. It is an essential component of the Release offering due to its ability to work as a single-axis solar tracker once deployed.

The Montaro is a next generation version of the Nomad and is positioned to compete on grids and mega projects, while also retaining the features that make it compelling for off-grid, mini-grid, and hybrid market segments. Key features include:

- A one in portrait (1P) single-axis tracking design
- Compatibility with industry standard modules – M10, M11, and G12
- Warranty passthrough agreements with tier 1 solar panel manufacturers
- Extreme terrain following capabilities that require significantly less ground preparation than traditional single-axis solar trackers

- Unique ground anchoring – eliminating the need for rammed piles
- Significantly faster installation capability – 100 MW in three months
- Simple redeployment / retiring capability – with minimal ground impact

About Cambridge Energy

Cambridge Energy is a manufacturer that specializes in pre-fabricated solar farms. The company is revolutionizing the solar energy sector by providing innovative, efficient, and versatile solar tracking systems capable of being deployed in a wide range of ground conditions and geographies – from 30 kW deployments to mega projects.
